Dear Dr. Bazeley:

Thank you very much for your letter of 1 November. A reprint of the article you requested is being forwarded and I shall be very glad to put you on my regular mailing list.

It is very interesting that on the day that your letter arrived with its inquiry about immunity to B virus there also came a letter from C. H. Andrewes in London with a precisely similar inquiry. Enclosed herewith is a copy of my reply to Andrewes. I think it would be very nice if you could reinvestigate the question of immunization against B virus particularly in individuals with previous infection with Herpes virus. I have B virus that has been adapted to monkey kidney and yields a titer of $10^6$ to $10^7$ per ml of culture fluid but it is not lyophilized. If you should be interested to follow through on this I shall be glad to send you some lyophilized B virus in the form of rabbit spinal cord as well as some tips on its cultivation.

With best wishes and kindest personal regards.

Sincerely yours,

Albert B. Sabin, M. D.
