March 15, 1951

Dr. Albert B. Sabin
Department of Pediatrics
The Children's Hospital Research Foundation
University of Cincinnati
Cincinnati, Ohio

Dear Albert:

Your beautiful Stanley flask arrived March 13th with contents intact—a full day ahead of the airmail copy of covering letter. There was still solid CO₂ in the flask on arrival. The flask was at once handed over to be returned to you by express.

Many thanks for the sera, for your very prompt response, and for your suggestions on procedures. Kerr is doing a complement-fixation test today with Wyeomyia antigen and your sera. I shall probably do a neutralization test next week. We will inform you of the results.

I hope you will have time to see us April 16th. Again many thanks,

Sincerely yours,

Kenneth C. Smithburn
