20 May 1946

As a supplement to the report entitled "Policies and Program Recommended by the Virus Commission for the Control and Study of Japanese B Encephalitis in Japan in 1946" submitted on 20 April, the enclosed review of the Virus Commission's activities in Japan is submitted. This report does not deal with recommendations but is rather a review of survey and research activities.

The original recommendation that no pre-epidemic vaccination be done (see Policies and Program) was altered at a meeting in Washington on 26 April. The new recommendations are embodied in a letter (see appendix) dated 2 May.
