Dr. Albert P. Sabin:
The Children's Hospital Research Foundation,
Cincinnati, Ohio.

My dear Mr. Sabin:

Dr. Eaton has shown me the slides of mycelia produced by M2E and EEF viruses. The lesions on the leg are very like those between Dr. Reiswig and I are finding after intramuscular injection of theovic strains of Theiler muris.

I am wondering whether you have published your observations. If not, may we refer to them as a 'recessive communication.' Where and if we write up our own studies?

Yours very sincerely,

Alwin P. Reiswig

Dec. 12, 1947.
