Dear Dr. Sabin,

I read the article about your study of Arthritis. I am suffering from infectious active Arthritis for fifteen years. I am 67 years old. As long as I can remember, my nose troubled me constantly. I must blow it constantly day and night, winter and summer. I had it X-rayed and treated a short time ago. X-ray showed no sinus infection, or did it check the discharge. While reading about your study, I always had a suspicion that my nose was in some way the cause. I mentioned it to many specialists and doctors.

I have been examined and tested many times. Was a [redacted] on my knees. I saw Dr. [redacted] and had both knees operated on three years ago. The infection started in both knees. It came and swelled with fluid in a
a very strange way, no doctor of
the many I saw ever had a case
exactly like it after the operation
on my knee. I have put up a
desperate fight. The operation a
failure and most all the motion
gone from my knees. But no
joint is entirely stiff. On the right
side every joint is inflected but my
elbow. On the left, the hip and knee
I realize if I don’t get help soon
I’ll be helpless. I can hopple
around the house, but I am in
terrible pain all the time. Please
Dr. Sabir, if you find a drug
that helps the condition in the
mice in any way would you try
it on me at once, or if you need
a human being in your work
I sure would be glad to let you
work on me. I cannot get any
relief in terrible pain constantly.
I am terrible nervous as I will
more, please answer me.

Yours Very Truly
