March 19, 1943

Major Albert B. Sabin, M.C.
23rd O.T.B., Sec. 4
Carlisle Barracks, Pa.

Dear Doctor Sabin:

I am sending along the results of the W.F.E. immunity and neutralization tests. I have a copy of the results in another book so you need not worry about what happens to this sheet. So far none of the sera which we intended for toxoplasma neutralization have arrived. Neither has the second specimen from Dr. Gibb (lymphocytic choriomeningitis) arrived. Every so often I receive a letter from Stokes, stating that as soon as the lyophilizing ampoules arrive they will be sent on. However, we still have a few of the larger sized ampoules to keep us going.

We are encountering some difficulty with the mice. Herrlein will now need more time in which to fill our orders for mice. It seems that he is handling orders for Army work only and cannot give us the preference as he did formerly. Hence the delay of several weeks. Cox has not yet sent on the vaccine which he promised so the delay is not too costly.

There is not much of anything else to report. Miss Brinkman and Henry are still away. My brother dropped in for a short visit from Ft. Belvoir. I haven't heard anything from Foshay and am wondering if he wrote you.

Sincerely yours,

Isaac Ruchman

Isaac Ruchman
