Dear Albert:

I had hoped to be in New York New Year’s week and and that we would work it together then. However, John thought he would rather spend it here in Detroit, So we won’t be going to New York.

I would be very much to borrow some of your slides, those of rabies, pseudo rabies, B Viruses, viruses, and encephalitis and vesicular stomatitis would be excellent and as many of each as you can. Let me have and especially those showing inclusion bodies. Could you also set me some dermatrophic vacuoles, virus and neurotropic herpes viruses and some virus of ascitic Choromeningitis for demonstration insulations.

Will be looking forward to receiving this material.
The course starts in about 10 days.

Wishing you both a healthy New Year - Edna also sends her wishes.

Maurice
