Dr. Albert Sabin
Children's Hospital Research Foundation
Cincinnati, Ohio

Dear Dr. Sabin:

The purpose of this letter is to request the second supply of the oral polio vaccine. Just send enough for two individuals as our Pediatrician was strongly opposed to giving the preparation to our youngsters who had previously received the Salk vaccine. Unfortunately, this was something that my wife handled and I was left in a minority group of one.

I had an episode which happened to me on the eighth day following the oral vaccine which was probably unrelated but it might be of some benefit to you in the follow-up of your cases. The primary manifestation was slight nausea, no vomiting, and diarrhea which lasted about forty-eight hours. There was an associated left frontal and left occipital headache. As mentioned above, I am sure this is unrelated but felt that it would be worth while for you to know of this problem. At that particular time there seems to have been another enteric virus in these parts but none of the other members of my family had this entity.

Thank you very much for sending the next phase of the vaccine.
