Albert B. Sabin, M.D.
The Children's Hospital Research Foundation
Elland Avenue and Bethesda
Cincinnati 29, Ohio

Dear Doctor Sabin:

As you are well aware the Army in administering immunizations usually does so on a production line technique. A question has arisen regarding the length of time which may be allowed from the time the vaccine is put on a sugar cube, in syrup, in 5% glucose or in distilled water before it must be administered to the recipient without significant loss in vaccine potency. We would appreciate any information you may offer in this regard.

Best wishes for the New Year.

Sincerely yours,

ROBERT W. SHERWOOD
Lt Colonel, MC
Preventive Medicine Division
