Dear Dr. Sabin:

We should be pleased very much, if you would kindly send us the attenuated polioviruses for Sabin-type vaccine.

In the Kitasato Institute Salk-type vaccine is now under production, but Sabin-type vaccine should be applied.

Is it permissible to use cell line culture such as human origin CO (conjunctiva) or FL (amnion) instead of monkey kidney cell culture, in order to maintain the attenuated strains?

Very sincerely yours,

Daizo Nagaki, M.D.
