Dr. Albert Sabin  
Children’s Hospital  
Cincinnati, Ohio

Dear Doctor Sabin:

I am not able to reproduce a satisfactory photostatic copy of this material; therefore, I am sending you the original sheets. We have the data in other forms but would appreciate getting this back.

Please note that to the left of each patient’s name is noted the month and day of month on which the first virus feeding was given. It does not necessarily indicate the date of the first serum collection.

Also note that there are certain antibody titers underlined, usually in red. These neutralization titers were repeated for various reasons and the accepted titer which we used for our final data is noted below the underlined titers.

I am also enclosing copies of statistical material that has been turned over to me during the past hour.

I look forward to your comments and recommendations.

Yours very sincerely,

Randolph Batson, M.D.
