Dr. Albert B. Sabin  
The Children's Hospital Research Foundation  
Elland Avenue and Bethesda  
Cincinnati, Ohio

Dear Dr. Sabin:

This will acknowledge receipt of yours of January 21st. The information contained therein is of great interest to me and I am anxious to be of any possible assistance of which I may be capable in following up this lead. I will be pleased to attend the conference on the work and any day between February 20th and March 10th would be suitable for me, although it would be a little more convenient if the conference could be arranged other than on a Monday.

If the information which you have at hand is sufficient to warrant a further synthetic program in the 8-aminoquinoline series, would it be asking too much for you to provide me with what information is now available. My reason for asking this is that next week we will have a new group of Ph. D. research students beginning work on their dissertations and if further research along these syntheses of the drugs seems to be indicated the chances are pretty good that we can get some additional manpower from among this group of students. Obviously this matter cannot wait until the latter part of February or after the conference since by that time the students will have selected their respective problems.

Sincerely yours,

Robert C. Elderfield
