Dr. Albert B. Sabin
Children's Hospital
Cincinnati, Ohio

Dear Dr. Sabin:

Within the past month we have had at Children's Hospital two cases of hydrocephalus with intracranial calcification. Clinically the diagnosis of toxoplasmosis was made. We have collected both spinal fluid and serum specimens on each one of these cases.

Dr. Hartmann has stated that you were interested in running complement fixation tests on such cases and were interested in collecting samples from other hospitals. Would you want us to send you these samples for study? The specimens so far have been kept under refrigeration.

If you desire these specimens, we would like to know exactly how you want them shipped. We will ship them as specified by you along with a clinical summary. Thank you very much for your consideration.

Very truly yours,

M. Remsen Behrer, M.D.
Resident Physician
