Dr. Albert Sabin
University of Cincinnati
Cincinnati, Ohio

Dear Doctor Sabin:

I understand that you have recently devised a skin neutralization test for toxoplasmosis. Would you please furnish me with any reprints or other information which you have on the validity and practicality of the test.

I do not believe we see much acute toxoplasmosis here but occasionally we see patients with intercerebral calcification characteristic of the disease. I wonder if your test would aid us in telling whether or not a patient had had toxoplasmosis many years before.

Sincerely yours,

L. M. Eaton, M. D.
