June 16, 1942.

Dr. John A. V. Davies,
Harvard Medical School,
Department of Pediatrics,
Children's Hospital,
300 Longwood Avenue,
Boston, Mass.

Dear Doctor Davies:

I was away from Cincinnati when your letter of June 3rd came and I regret very much the delay in answering it.

I was delighted to learn of your progress with the Toxoplasma neutralization test.

With regard to your question concerning complement fixation, we believe that the test in its present form has only limited usefulness. We would consider using it only in cases of suspected acute toxoplasmic infection.

Dr. Warren and I have written out what we have done with the complement fixation test and it has been submitted for publication. I am sending you a carbon copy of this paper and would appreciate it very much if you would return it to me when you have finished with it along with the carbon copy of the other manuscript that I sent you.

With kindest regards,

Sincerely yours,

Albert B. Sabin, M.D.
