Dear Dr. Sabin,

prof. De Toni and I should be very interested in reading about your new technics for demonstrating toxoplasmic antibodies in man, ("in vitro" dye test, as mentioned by you in your last letter to prof. De Toni).

As we are not able to find here in Genova the review "Science", in which your article should appear, we should be very obliged to you for sending us a reprint of it, as promised by you.

We have so far experimented your cutaneous rabbit test, and it has allowed us to detect 4 cases of italian toxoplasmosis (2 are yet published, and I hope you will have got the reprints of us); but the rabbit test gave also to us some aspecific answers in non-toxoplasmic neurologic diseases.

I thank you very much, and remain, dear Dr. Sabin

Yours sincerely
