Dr. Albert Sabin
University, Cincinnati Medical School,
Cincinnati, Ohio.

My dear Dr. Sabin,

I have been told that you may be able to give me some information about the reported discovery in the Soviet Union of a "cure for paralytic polio." A news story regarding such a discovery appeared in the New York Times on January 25, 1960.
I have not seen the item in the Times but I have read a short account of the policies which was sent from Brisbane, Australia, and which appeared in a local newspaper.

It happens that a J. T., has been paralyzed since 1955 by an attack of paralytic polio, on the day that his second child was born. (He was not affected.) The child was born (He was not affected.) The child was born.
left hand, only.

If you can help us get further information about the report referred to, her husband & parents & other relatives will be most grateful.

The Brisbane clipping noted that "the drug, called "karantonei, was made by processing the fruit of a perennial herb known in Central Asia as "karkavoek-Black globe.""

---(it) has been tested in many Moscow clinics and "completely cures the paralysis caused by polio." Sincerely yours,

Louise Leonard McLaren
