Dear Albert:

Thank you for your letter of March 22. Although I recall, I am still sorry that it will be impossible for you to attend the meeting of the American Association of Cancer Research in Atlantic City on April 13-15. The question raised in your letter was anticipated by Dr. Trentin several months ago. We have had several cultures of the virus from the American culture type register. I would be pleased to provide you with further details, however, the extract will be published momentarily in the proceedings.

Dr. Felix Haas asked me to give his children some of your polio vaccine. That which you gave me was used up a year ago. If it would be convenient, I know of about 25 individuals who would appreciate having your vaccine.

Each is fine and joins in all best wishes.

Please keep your eyes open for a young virologist for me. As I mentioned, I am looking for a young man trained in the fundamentals of virology and am hopeful that he would have clinical training in the field of pediatrics.

Sincerely,

Grant Taylor, M. D.
