Dear Dr. Sabin,

I wish to thank you very much for having sent me your last works on toxoplasmosis, poliomyelitis and other reprints, which are very interesting and useful for me in my teaching work.

I should like to hear from you what is your opinion on the publication by Franke and Horst of so many cases of toxoplasmosis, based only on the microscopic findings in cerebrospinal fluid after standing for 1-2 days without centrifugation. I think that Westphal's criticism (Zeitschr. f.Tropenmedizin und Parasitologie 1952/480) is perhaps right. There are now in Germany some publications (these of Paul f.i., Monatschr.f. Kinderhik.1951-1953) which are very confusing.

I am now writing, with dr. Bucalossi, a little monography on Toxoplasmosis, for Italian medical doctors, and I should be very obliged to you if you will give me your kind permission to reproduce 1-2 photos from your papers "Chorioretinopathy associated with other evidence of cerebral damage in childhood" (J.Pediat.1949) and "Toxoplasmosis: diagnosis and treatment" (Trans.Am.Acad.Ophthalm.a.Otof.1950). Authors and Reviews should be quoted, of course.

I thank you in advance. I hope I shall see you again next autumn in Rome at the International Congress for Poliomyelitis.

I remain, dear Dr. Sabin,

Yours very truly
