Dear Dr. Sabin,

Thank you for your letter of January 16 and for having taken the trouble to have published our paper. I asked the pediatrician Dr. Van der Elst, to answer me about the questions you have put. The sugar has unfortunately not been determined, the cells were mostly mononuclear leukocytes, and the parasites were demonstrated only in the centrifuged sediment of the cerebrospinal fluid.

I learned from your letter that the First International Conference on Poliomyelitis will be held in July. If my presence might be desirable, presumably I will have word from it in good time. Then, I hope to see you at the Conference.

Sincerely yours,

Dr. J.B. Verlinde.
