Dr. E. Nihoul
Department of Virology
University of Ghent, Belgium

Dear Doctor Nihoul:

We would be thankful, if you could send us 2 reprints of your paper in Amer. J. Hyg. 66, 102, 1957 (ECHO 9 virus type 9 as the agent responsible for an important outbreak of aseptic meningitis in Belgium).

Last summer we had an opportunity to study a similar epidemic in Milwaukee as well as a smaller one in Cincinnati. We were not quite as successful with the ECHO 9 complement fixation technique as you were in your studies. You have mentioned in your paper (p. 114), that you have work in progress concerning the specificity of this reaction. Although the ECHO monkey standard sera do not react across to a major degree, this may be different with human sera. Some limited data of ours suggest such a possibility, and I would be interested to know, whether your experience may be simi-
lar.

Sincerely yours

R. Wigand, M.D.
