Dear Doctor Schultz:

Many thanks for your letter of September 27th. Doctor Berry must have known how busy you were going to be at this time of the year before he asked me to take care of the arrangements of the coming conference. I sincerely hope, however, that formally or informally, you will nevertheless be able to take an active part in the discussions. There are two topics in particular which I should like to present for your consideration:

1) Vaccines and Immune Serum in Prophylaxis or Treatment — Present Status and Future Possibilities.

2) Future of Chemoprophylaxis as a Practical Measure for the Control of Poliomyelitis.

In view of the fact that you are already presenting a paper on the antigenic properties of the virus for Hudson's symposium and because you have done more work than anyone else in the field covered by the first topic, it seemed to me that you might perhaps be best suited to start the discussion on it. As regards the second topic, I also think that it would take very little effort on your part and perhaps no preparation whatever to present. If you choose one of these, Doctor Olitsky has consented to present the other.

The following are the other topics which I have considered for discussion at the conference and the persons whom I have in mind to present them.

1) Types of Poliomyelitis Virus, Reinfection, and Their Epidemiological Significance. To be presented by James D. Trask.

2) Portal of Entry of the Virus and Pathogenesis of Poliomyelitis. To be presented by A. B. Sabin.

3) Unsolved Problems in the Epidemiology of Poliomyelitis. To be presented by L. Aycock.

4) Vitamins and Poliomyelitis. To be presented by C. W. Jungeblut.
October 5, 1937.

I sincerely hope that you will be able to find it possible to present one of the above topics and to let me know in the near future if you have any other suggestions with regard to the other subjects.

With kindest regards,

Yours sincerely,

Albert B. Sabin.

Doctor E. W. Schultz,
Department of Bacteriology and Experimental Pathology,
Stanford University,
California.
