Dear Dr. Mirchamsy:

As you probably know, the Instituto Butantan is an official laboratory that belongs to the Public Health Secretary of the State of São Paulo, Brazil, whose main objective is the study and production of immunotherapeutics of interest to the Public Health.

Recently we were honoured by Dr. Albert B. Sabin's visit when he told us about your expertise in the production of vaccines against measles. We are interested in starting an experimental project aiming at the production of such vaccine in São Paulo and for this, a new building is being constructed, as well as equipments are going to be purchased. Thus, we would appreciate to know if we could have your collaboration and help in the project, as firmly recommended by Dr. Sabin. Please, let us know if you have interest in accepting our invitation. If positive, we can bring the subject back, as soon as you contact us.

Awaiting for an answer, we remain,

Yours very truly,

Dr. Fauze Carlos
Diretor
