March 23, 1967

Dear Dr. [Name]

Your letter of March 7 addressed to Mexico City was forwarded to me only recently. I should like to say that the diagnosis of the noninflammatory polio-like disease thus far has been made only in fatal cases. The histories they presented were quite unlike yours. The paper has not yet been prepared for publication and I shall be glad to see that you get a copy when it is ready.

With best wishes,

Sincerely yours,

Albert B. Sabin, M. D.
