Dear Dr. Sabin,

I am writing to thank you for your letter of the 9th May, and your comments on the Soviet vaccine, for the treatment of M.S.

During the last ten years, I have been collecting all the available data connected with M.S., and reading up all the projected treatment of the disease, and as a layman, the complaint has always appeared to me, to be something which has occurred in the manner of an 'infected' disease, rather than an 'organic' failure of the body. The circumstances, and coincidence, of the onset of the disease in my own case, for example.

The references to Rabies virus, in connection with the Soviet vaccine for instance, has puzzled me in some aspects, because Dr. W.M. Crofton, refers in his booklet, printed some years ago, describing his treatment for Poliomyelitis, to the fact that, he has derived the causative bacillus of Polio., from the virus fixe material of Rabies. ?

In fact now, the question which immediately occurs to me, is, whether it is at all possible that these three diseases, that is, Rabies, Polio., and M.S., could have any relationship to each other ?

I do realise, that only professional advice, can clear up this possibility, and if I could respect my opinion about this possibility, I would be deeply grateful.

Enclosed, is a copy of Dr. Crofton's booklet, in which he makes the statements I have mentioned, on the head of Pg. No7., for your perusal.

With my deepest respect sir,

Yours Sincerely,
