Dr. Albert B. Sabin
The Children's Hospital Research Foundation
Elland Avenue and Bethesda
Cincinnati 29, Ohio

Dear Dr. Sabin:

Thank you for your letter of October 30. We are finishing the complement fixation tests with heterologous antigens on the sera from the pneumonitis epidemic. Since time will be short, I shall take the results with me to the meetings at Excelsior Springs.

With regard to the complement fixation technique, I use a 100% end point with two incubation periods of one hour each at 37 C. I think that when it comes to writing a description of the serologic techniques for the paper, it might be better for me to do that myself after you have written the foundation. At any rate, we can talk this over next week.

With best regards,

Sincerely yours,

Samuel B. Salvin
Scientist
