Dear Professor Sabin:

On return from my trip to the U.S.A. and South America I found your kind letter and the parcel containing the attenuated virus strains which arrived in good condition. First of all I would like to thank you for all your kindness so far.

As you requested in your letter I want to clarify the following questions by a written statement:

1) The Vaccine based on Sabin's attenuated poliomyelitis virus strains will be produced under my supervision in a separate facility in which no other viruses will be used.

2) During the course of the production of the above mentioned vaccine the people actually engaged in the work will not work with other viruses.

3) The recommended procedures for production, testing and essay which we discussed, and a copy of which is in my possession, will be followed. Should N.I.H. issue Minimum Requirements deviating from these procedures we would discuss such a situation in order to find out how to proceed further.

4) The legally registered name of the above mentioned vaccine (which is yet to be decided upon and recorded) will appear on the labels of the distributed material.

5) Prior to release of the above mentioned vaccine for use you will be granted the opportunity to go over the protocols of production and testing as well as to examine the histologic sections of the monkeys used in the tests in our laboratories in Vienna.

I will take the opportunity to inform you in due course about our progress in connection with your vaccine.

With the kindest personal regards

Sincerely yours
