Dear Dr. Sabin,

Thank you for your letter Nov. 5th. We would be very happy to know if in the meantime the N.I.H. had made its choice of attenuated strains which could be recommended by the Health authority for public use. May be you can give us already details in this direction. On the other hand we learned from the press that now field trials get started in Texas, Minnesota and Cleafland. We would be very thankfull if you could let us know, what type of vaccine and what strains will be used in the respective trials.

With the kindest regards

Sincerely yours
