Dear Dr. Sabin,

Recently we answered a tender for 300,000 doses of oral poliovaccine issued by the Public Health Authorities of Hong-Kong. Since this vaccine was to be supplied in a concentrated form to be diluted by local laboratory workers, we have answered that the vaccine could only be made available provided that you would agree on their dilution know-how.

Our agents have given their assurance that these dilutions methods have already been used by local authorities in Hong-Kong in previous uses of Sabin oral poliovaccine. We would appreciate receiving your agreement for this supply of vaccine.

With kindest regards.

Sincerely yours,
