Dear Dr. Sabin:

The attached manuscript by Milford N. Lunde and Leon Jacobs entitled: CHARACTERISTICS OF TOXOPLASMA HEMAGGLUTINATION TEST ANTIGEN consists of 15 pages of text and references, 2 tables and 0 figures.

Would you be good enough to review it and return your comments in DUPLICATE as an anonymous memorandum to be transmitted to the author. (The third copy may be retained for your own files). Please use an additional sheet if necessary.

If you cannot referee the manuscript in the next 10-14 days, will you return it for referral to someone else?

Sincerely yours,

JOHN Y. SUGG
Editor-in-Chief

COMMENT: referee # XI

This is another example of "fragmentary publication", which I regard as unfortunate. The largely technical information in the present communication could very well have been incorporated in a more comprehensive report on the toxoplasma hemagglutination test. However, the data should be on record, and I, therefore, recommend publication.
