Dear Dr. Sabin:

The attached manuscript by B. Roizman, M. M. Mayer and H. J. Rapp entitled: IMMUNOChemICAL STUDIES OF POLIOVIRUS. III. FURTHER STUDIES ON THE IMMUNOLOGICAL AND PHYSICAL PROPERTIES OF POLIOVIRUS PARTICLES etc.

consists of 18 pages of text and references, 3 tables and 1 figure.

Would you be good enough to review it and return your comments in DUPLICATE as an anonymous memorandum to be transmitted to the author. (The third copy may be retained for your own files). Please use an additional sheet if necessary.

If you cannot referee the manuscript in the next 10-14 days, will you return it for referral to someone else?

Sincerely yours,

JOHN Y. SUGG
Editor-in-Chief

COMMENT: referee # 1 MS # 784

This communication contains important data and is acceptable for publication in the Journal of Immunology. I do not know whether the Journal has established a fixed policy regarding the use of the expressions of "acute" and "convalescent" with reference to sera and antigens. Throughout the present communication sera, as well as antigens, were called "acute" or "convalescent" and strictly speaking this would not appear to be good usage. I think that the proper expression is acute phase serum and convalescent phase serum, or antigen and I would suggest that these changes be made in the present communication unless there is no special policy of the Journal in this particular issue.
