MEMORANDUM

April 3, 1961

TO: Members, Enterovirus Committee

FROM: Executive Secretary

SUBJECT: Collodion Membranes.

For your information please note copy of a letter from Dr. S. A. Peoples in reference to the production of Gradocoll-type membranes. Unfortunately, as you will note, Dr. Peoples cannot make these membranes in the pore sizes that would be of interest to virologists.

The Millipore Filter Corporation of Connecticut has also been contacted and after considerable correspondence and negotiation they have informed me that they regret they cannot at this time make their membranes in sizes of interest to virologists.

Harwin M. Harris, Ph.D.

Bethesda 14, Maryland

Dear Dr. Harris:

Thank you for your letter of March 21 in regards to producing collodion membranes. I am sorry to inform you that I am unable to produce these membranes in the range of porosity of 10-1000 μμ. However, I appreciate your interest.

Sincerely yours,

/s/ S. A. Peoples, M.D.
