MEMORANDUM

To: Members of the Tropical Medicine Study Section

From: J. H. Ellis, Ph. D., Executive Secretary

Subject: Actions of National Advisory Councils

Enclosed is a summary of National Advisory Council actions in connection with applications reviewed at the September 21 meeting of the Tropical Medicine Study Section.

In connection with 112-2196, Doctor Sulkin has been advised that his application was disapproved without prejudice and that the Study Section would be interested in a revised application.

With reference to 114-43(64), the Council recommended approval in principle, with the extent of further support to be administratively determined subsequent to the Council meeting. Following a conference between Doctor Faust and Dr. Allen, Assistant Chief, Division of Research Grants and Fellowships, the Surgeon General has approved a grant of $20,000 for one year and $20,000 for a second year, with any further support to be determined after reevaluation of the project and a project site visit by Council members.

The National advisory Cancer Council upheld the recommendation of the Study Section in recommending disapproval of application 611152, by Doctor Blagon for studies on "Infectability of Malignant Tissue by Different Strains of Schistosporum Grandi."
