- **Time In-house Repair 3** 120

**Conservator's Note**

This oversized photograph album was received by the lab with the plates detached from the binding's cloth hinges. Rather than rebinding, the loose plates were housed in a separate tray below the binding in the same corrugated box for better preservation and handling. The individual plates were surface cleaned to remove heavy soot in gradual stages prior to digitization. They were first surface cleaned overall with Dust Grabber cloths, followed by Absorbene soot sponges. The margins around the photographs were then further surface cleaned with vinyl eraser crumbs and block erasers to remove more engrained dirt and smudges. The plates and binding are stored in pull-out trays within a corrugated clamshell box.
