Dr. H. Ramyar

Director
Institut D'Etat des Serums et Vaccins Razi
Boite Postale 656
Hessarak - Karadj
Teheran - IRAN

Dear Dr. Ramyar

During his recent visit to Brazil Dr. Albert B. Sabin strongly advised us to contact Dr. H. Mirchamsy requesting his help and expertise. Our objective is to start the production of vaccine against measles in Brazil.

Very fortunately for us Dr. Mirchamsy has accepted to collaborate and has suggested that the Instituto Butantan from São Paulo, Brazil, could send two qualified people to be trained at the Virus Department of the Razi Institut. We have chosen Dr. Edda de Rizzo, Chief of the Tissue Culture and Control Laboratory of the Virology Dept. and one of her biologists, Mr. Inácio França Mendes. At this moment we are writing to you to ask for your authorization for such training which, according to Dr. Mirchamsy, should be of two months duration, starting at the end of october. Both persons, later on, may extend their training trip to Japan where Drs. Sabin and Mirchamsy are trying to get the seed virus for the vaccine.

Enclosed you will find a brief Curriculum Vitae of our Collaborators.

Thanking in advance the kindness of your attention, we remain,

Truly yours,

Dr. Bruno Scerensen Cardozo
Director
