College of Medicine
Cincinnati, Ohio

Dear Dr. Sabin:

Recently a case of probable toxoplasmosis was diagnosed at autopsy in this hospital. We would like to determine if the mother's blood contains neutralizing antibodies. Articles in which you describe a rabbit skin test for these antibodies indicate that you would be the most qualified to help us.

In the first place, could you tell us where we could get viable organisms of human toxoplasma? In the second place, we would appreciate hearing about any refinements in the procedure which you might have developed.

Sincerely yours,

George M. Hass
