Dear Albert:

I am very grateful to you for the material which accompanied your letter on 29 October consisting of:

1. Lyophilized Hawaiian dengue virus (human serum)
2. Lyophilized sandfly fever virus
3. Stool specimen on patient, [REDACTED].

I note also the important advice about intracutaneous or intravenous inoculation and the dosage for item 2. Our chimpanzees have now gone ten days without fever and I presume that we will have to call the ^{of} experiment unsatisfactory. At a later date I will try your lyophilized material if possible.

The thermos flask arrived intact. We shall treasure it carefully.

As ever,

John R. Paul, M.D.
Director
