

Peru, Verme &  
Aug 1, 1938

Dear Albert:

I hasten to answer your letter of July 30 so as to inform you in good time that additional 250 reprints of the J. A. M. A. article should be ordered. The cost is low and the savings of secretarial services will balance the cost. Will you be good enough to convey my thanks to the secretary and to Dr. Northrop for their generosity?

J. A. M. A. editorial corrections have a familiar sound. I missed out on the quotations of the experimental details; but I may have had the J. E. M. style in mind at the time. Inien sake, editores?

I hope the Science paper will be approved soon. If accepted, will you please order 200 reprints with covers, small size, single

column to page + request 25 free copies of  
Science (i.e., if this letter offer still holds)  
Both J.A.M.A. + Science bills are to be  
sent to me, of course.

The taurine exercises on the beach  
shored yield good fun. There are no  
such things here. All in all Woods Hole  
is a delight to the philosopher, and shore  
to be able to say on your return that you  
have had an enviable holiday.

Dr. J. Magan, being in frequent  
conference with you, has a decided  
advantage. The preliminary adaptations  
will thus pass over, apart from her  
acquisition of methodology and knowledge.  
It is nice of you to take her under your  
wing. Please send her my best regards.

I have heard from Carl recently.

He is apparently concerned more with his practice than with his laboratory. He has, however, set off on the right foot there, by becoming office assistant to one of the Washington University professors. He will ripen (I hope) with the ~~to~~ years and develop greater intellectuality and substantiality.

I was distressed to hear of the fatal accident to Dr. Earl McKinley (he was on the Clipper which probably sank in the Pacific). He once carried on an active correspondence and I recollect one of his letters to be a most remarkable bit of writing.

The uniform absence of lesions in the human bulb is unexpected. It will be interesting to learn the results of the other participants in the study; also the relation of clinical bulbar types to this, besides the

other questions already brought up.

Mrs. Olitsky is becoming quite adept at ~~typing~~ typewriting (touch system!) and has received a "diploma" from Washington as a certified Braille transcriber (for the blind). She sends her cordial regards to Sylvia and you, as I do.

As ever,

Pico
