Dr. Albert Sabin  
Rockefeller Institute for Medical Research  
66th Street  
New York City

Dear Albert

I received your slides some time ago, but have been so very busy that I failed to acknowledge them.

It was a very well selected group and I found them very useful. They dove-tail very nicely with the collection that I have. Virus worked very well. Vaccine virus gave a very severe reaction in the rabbit testicle and titrated to one in a 100,000,000 intracutaneously.

Knowing that you have no immediate need of the slides, I am holding them for a short time so that I can study them a little more and then I will return them to you.

I will also tell you at another time how the course went. I followed in a general way the outline I sent you.

With best regards, I am

Sincerely yours

  
Maurice Brodie, M.D.
